<b>Mo</b> 20:00 8 pm 22 June		<a href="https://tinyurl.com/yako3unz">https://tinyurl.com/yako3unz</a>  <p>waves break close to the shore and stones, easy for me to approach, messy, quite close to each other</p>	onshore SW

Tuesday morning waves were twice as big as Monday, the wind direction according to msw was the same and the wind was even weaker .. does not make much sense to me.. (wrong data on msw???, sth is missing, wtf is swell?)

<b>Tue</b> 11:00 11 am 23 June		<a href="https://tinyurl.com/y9josbt8">https://tinyurl.com/y9josbt8</a>  <p><b>too strong</b> for me, could not break through, consider learning rip on the left, guys told me it's dangerous</p>	SW

I expected good waves in the morning (north direction) but nope, how is it even possible that wind changes direction from north to sw in such a short time?  
basically flat, is that even "surfable".. probably on sup board...

W
